

Forward and inverse kinematics

What should the joint ~~angles~~ ^{state/conf.} of the robot be so that the end-effector

reaches a desired pose?

How to move the end-effector to a desired pose (position + orientation)
gripper or suction cup

Forward kine.

If my joint ~~angles~~ ^{state/conf.} are given what would the pose of end-effector be?

Forward kinematics

$${}^0T_2 = {}^0T_1(\theta_1, l_1) {}^1T_2(\theta_2, l_2)$$

in terms of θ_1 and θ_2
Given

(Denavit Hartenberg)
Parameters/convention

Denavit Hartenberg parameters

① \hat{Z}_{i-1}, \hat{Z}_i aligned along the axis of rotation

② Choose \hat{x}_i along the common normal between \hat{Z}_{i-1}, \hat{Z}_i

③ $\hat{y}_i = \hat{Z}_i \times \hat{x}_i$

- a) $\theta_i =$ Rotation along Z_{i-1} (to align x_{i-1} with x_i)
- b) $d_i =$ translation along Z_{i-1} (to align the origins)
- c) $\alpha_i =$ Rotation along x_i (to align Z_{i-1} with Z_i)
- d) $r_i/a_i =$ translation along x_i (to align the origins)

(a) and (b) can be swapped
(c) and (d)

Bwt Transformation along z goes first
